BRITISH COMPANY SEEKS US DISTRIBUTORS AND MANUFACTURERS FOR GOLF COURSE DRAINAGE SYSTEM

February 2010

STAND 2251

Leading British company, Econoplas Ltd, is seeking distributors and manufacturers under licence for its revolutionary drainage system, Ezidrain – ideal for use on golf courses.

Ezidrain is created from 100% non toxic recycled plastic, which is converted into easy to install blocks of macro and micro porous cells that effectively drain surface water from agricultural fields, sports pitches, golf courses and domestic gardens, without clogging.

Ezidrain panels measure 39 inches long x 9 inches wide x 1 3/4 inches thick and have a proven flow rate of 18,000 millimetres per hour. It has a 20% greater drainage capacity than gravel and percolation rate ten times greater than sand. They are effective in all soil conditions and work relentlessly without the risk of clogging.

James Arrowsmith, managing director of Ezidrain Sales & Marketing, said, “The huge benefits of Ezidrain are already being enjoyed at the Trump Golf Course in New Jersey. It significantly improves the drainage of water compared to conventional methods, due to the unique capillary draw action created by the product.

“It is very exciting times for the business and we will be at the world’s largest golf show in San Diego in February showcasing Ezidrain.”

Interested parties can contact Tom Stender on 585 734 8609 / tom@ezidrain.com or visit www.ezidrain.com
